GAUGED PORCELAIN TILE PANELS

ARABESCATO

PORCELAIN

This European concept is the ideal solution for any American surface. The large gauged porcelain panels look like natural stone but are more versatile than marble, granite, river stone, and other material found in nature. Creating seamless appearances from building facades to cabinet coverings and everything in between. The strength, light weight, thin panel is perfect for almost any surface and is suitable for exterior applications in freezing and non-freezing climates when proper installation methods are used. Other applications include:

- Floors
- Walls
- Countertops
- Shower Walls
- Fireplace Surrounds
- Backsplash
- Concealed Doors
- Table Tops
- Sinks
- Exterior Walls and Facades

Measuring just 6mm in thickness, they instantly become some of the easiest and most lightweight material to work with and are a fraction of the cost of natural stone. Advantages of porcelain over other materials include:

- Stain-resistant
- Extreme Heat resistant
- Non-porous surface does not harbor bacteria
- Does not scratch or wear

Fall in love with the endless possibilities of these panels for indoor and outdoor applications. Your freedom to design grows.

Established in 1979 in Boise as Idaho's premier wholesale tile, brick, and stone distributor. The Masonry Center, Inc. has expanded throughout the northwest. Our strong commitment to customer service combined with the buying power of five locations offers our customers in Idaho, Montana, Washington and Wyoming, unparalleled selections and service.

SPECIFICATIONS

Our panels are derived from a combination of earth with fire. The continuous veining between pieces is subject to the typical variation of natural products. In the order manufacturing phase, the face selection is random and therefore the continuous veining between the ordered pieces is not guaranteed. To ensure customer satisfaction, select tile from the same lot, same size, and numerical shade. Look over each tile before installation begins. During installation, rotate tiles to avoid repetitive patterns.

Installing Contractor: Due to the unique characteristics and unconventional techniques required of Gauged Porcelain Tile Panels (GTP), this work requires installers who are equipped with the proper tools and have acquired sufficient product knowledge and installation experience through the completion of an installer Qualification program as listed in the ANSI A108.9/Section 10 handbook. For specific questions for qualification programs, please reach out to your local sales team.

APPLICATIONS	FLOORING	WALL	COUNTERS	PEI RATING	VARIATION	COF	FREEZE/THAW	BREAKING STRENGTH	WATER ABSORPTION	HARDNESS	CHEMICAL RESISTANCE
